University of Rajshahi

Department of Computer Science and Engineering

B.Sc. Engineering 1st Year (Even Semester) Examination 2021

Course Title: CSE-1222 (Object Oriented Programming Lab) (Set-1)

Question 1: Make a class **Employee** with a `name` and `salary`. Make a class **Manager** inherits from **Employee**. Add an instance variable, named `department`, of type `String`. Supply a method `toString` that prints the manager's `name`, `department`, and `salary`. Make a class **Executive** inherits from **Manager**. Supply appropriate `toString` methods for all classes. Supply a test program that tests these classes and methods.

Question 2: Write a program **MatrixSum** (MatrixSum.java) that reads two input files which contains two matrices of size 3x4. Then write the sum of these two matrices into another file. For example, if you call

```
java MatrixSum A.txt B.txt C.txt
```

Then the program will read two input matrices from `A.txt`, `B.txt` and write the sum of these two input matrices into `C.txt`

Question 3: Write a java class `Example_throw`, which we have a method `testMethod` with an integer parameter. Declare two exceptions `Exp1` and `Exp2` using the `throws` keyword which will be activated depending on the value of the integer parameter. Then in the main function within `ExceptionHandle` class, the exceptions thrown are handled by the catch block.
